

Collaboration & Partnership

Together we glow, together we grow.

The whole is greater than the sum of its parts.

——Aristotle

- **Mutual evaluation and suggestions:** Obtain objective, unbiased feedback about the project, which can serve as a basis for optimization and iteration. Some difficulty in the design can also be discussed among each other to see if new ideas can be generated.
- **Joint Promotion Platform:** Several teams can collaborate to organize an online/offline project presentation meeting, which can simultaneously serve as a synthetic biology education activity for peer students and important feedback resource.
- **Education:** Since iGEM teams shares common goals in synthetic biology education and now have convenient communication channels and resource sharing platforms supported by the current Internet and various media, it is highly worthwhile to explore the co-construction and sharing of communities.
